

Easyfill Sandbag Instructions for use

The **Easyfill Sandbag** is supplied without sand to reduce transport costs and energy use. It is quick and simple to fill.

This package contains: 1 outer bag (with Zip) and 1 inner bag with filling spout and cord tie.

You will also need a funnel (you can improvise with heavy paper if you don't have one) and 5kg of dry sand.

1 Pour 5kg of dry sand into the inner bag through the filling spout. Use a funnel.

2 Tie the inner bag closed with several loops of the cord and your strongest knot. Don't use a bow.

3 Slide the inner bag into the outer bag. The filler spout end of the inner bag should enter the outer bag first

Note: Any sort of dry sand without organic material is acceptable. Sand can be purchased from garden supplies shops very cheaply. Dry sand can also be purchased from hardware shops in 10kg bags.
